

1. Export data

1 Export data

- The export data functionality is available for users with the role Principal Investigator.
- Use the menu link [Export data] to export data from the Viedoc system in the selected format.
- To export data select all or one specific patient at the center, all or selected modules and visits (select all by clicking the Module and Visit links respectively).
- Different encodings are available, default is ANSI.
- Select from the different output formats: ASCII, SAS, PDF and CDISC ODM. For the ASCII format you can set which column delimiter to be used etc.

1. One patient selected
2. Nine modules selected
3. Background visit selected
4. Output format ASCII
5. ASCII export files

The screenshot shows the 'Export data' window with the following annotations:

- 1**: Points to the 'Patient' dropdown menu showing 'KR 999 00004'.
- 2**: Points to the 'Module' section where nine modules are selected: Patient information, Diagnosis, Metabolic, Cardiovascular, Cerebrovascular, Respiratory, Musculoskeletal, Tumours, and Liver / Gallbladder.
- 3**: Points to the 'Visit' section where 'Background' is selected under 'Return visit'.
- 4**: Points to the 'Output to delimited ASCII' radio button under the 'Include' section.
- 5**: Points to the 'Export' button at the bottom right, which is surrounded by a grid of icons representing different data formats like PatientInfo, Cardio, Metabol, Diagnosis, Biocell, Tumour, and CDISC.
