

3. Patient reports

1 Patient reports

- Click the menu link [Patient reports] to view the pre-defined Patient report and global templates over patient data. To create your own templates see the instructions below.
- As soon as the data has been entered in the system it is available in the different reports.

2 Patient report

- Patient reports are a valuable means of keeping track of a patient's progress. They have a variety of uses including assisting clinicians to:
 - Follow patient response over the course of their treatment.
 - Monitor IGF-I changes to assist with assessment of the efficacy and safety of Somavert treatment
 - Facilitate discussion with patients, with tables and graphs helping them to visualize the benefits of their treatment more clearly.
- The patient report consists of the following parts:
 - Patient graph part in three versions:
 - Central IGF-I graph
 - Local IGF-I graph
 - Diabetes graph
 - Patient details part:
 - Medical History
 - Examinations
 - Visits

3 Create a personal template

- Create your own templates in Patient reports if there are variables you are interested in that aren't covered by the existing templates.
- For example if you would like to view the blood pressure development for a patient. You start out by clicking the link [Show / change settings](#).
- Select output as Graph - Change over time and to view data from all visits grouped on visit date.
- In this example are only interested in the supine heart rate variable found in the Examination module so we only specify the left axis.
- When all settings are done click [Save as template](#), enter a name for the template and click [Save](#).
- Click the [Show/change statistics](#) to view the resulting graph.

Create your own personal templates by clicking [Show/change settings](#) and selecting the data you would like to view. Then click [Save as template](#), enter a name and click [Save](#) to save the new template. To view the result click [Show statistics](#).
